

Architectural and Engineering Design (IND252, 352, 452, 552, 553, 554, 555)

Main office:	425.844.4800	Guidance Counseling:	425.844.4890
Mission:	The mission of Cedarcrest High School is to create an authentic and engaging learning experience that will prepare students for their futures through positive relationships.		
Vision:	Each student will graduate ready with the essential academic, social and emotional, and cultural skills necessary for future success.		
Website:	https://www.chs.rsd407.org		
CIP Code:	151302		
State Course Code:	21107		
Content Area Code:	121		
Course Description:	1: Students learn Computer-Aided Drafting/Design (CADD) techniques. Standard 3D modeling and design practices are learned and applied to architectural and engineering projects and drawings. A final design project is included each semester to challenge the student's knowledge and skill. TSA and/or FRC leadership component. 2, 3: Students learn advanced CADD techniques, including extensive work in 3D. Three dimensional models are created and rendered in various programs. Independent and group activities are included. TSA and/or FRC leadership component. 4: Students refine their skills in 3D modeling and illustration, keeping their customers in mind at all times. Student skill sets and projects are defined and evaluated by the student and instructor. This course is repeatable for credit. TSA and/or FRC leadership component.		
Instructor:	Mr. Miyoshi		
Phone:	425.667.4841 or 425.844.4816		
E-Mail:	MiyoshiM@RSD407.org		
Office hours:	Before and after school (approximately half hour) and by appointment		
Books:	<i>Mechanical Drawing</i> Ninth Edition by French, Svensen, Helsel, & Urbanick <i>Architecture: Drafting and Design</i> by Hepler and Wallach <i>AutoCAD and Its Applications</i> by Shumaker, Madsen, & Saufley <i>Rhinoceros User's Guide</i> Other supplemental material as needed

Student Provided Materials and Class-use Fee

Students should provide their own brains and enthusiasm. All tools will be provided by the school and may be checked out to the students for during the semester. The class-use fee pays for the materials used by the students for the class including one small 3D printed project. Other three-Dimensional print jobs must be paid for before models are printed.

Class Objective

The objective of Engineering Design is to give the students exposure to, and to stimulate interest in the working environment of the engineering field while providing the students with an opportunity to acquire beginning drafting, modeling, and engineering skills.

Class Expectations

Engineering Design is a year-long class for those who have an interest in drafting, engineering, or related fields. It is expected that the student who takes this class will obtain certain skills and knowledge important to those entering these fields. The skills and knowledge that the student will receive are listed as competencies. These competencies will be demonstrated by the students through a variety of assignments and tests and through their daily performance in class.

Attendance Policy

The core content of the class will be mechanical drafting and Computer-Aided Drafting (CAD). Because not all students have access to the tools of either types of drafting, most of the work will be done during the class period. This makes class attendance extremely important. Students with an excused absence may make up the work for the class.

GitHub

GitHub is a professional tool used for source control and sharing projects. It is especially useful when changes are being made to projects both for archival purposes and for a history of what has been done. It is also useful for backing up projects. Students will find it a handy tool when moving from computer to computer. It is recommended that all students get a GitHub account and use it to sync with their local projects. Students should make private repositories and make the instructor a collaborator on class-related repositories. It is suggested that GitHub Desktop be used to sync and archive architectural and engineering projects (and Unity projects).

Tardy Policy

Roll will be taken and the school policy will be followed.

Dress Code and Language

The classroom should be considered the workplace for the students, and appropriate attire and language in the workplace is important. To help solidify these concepts, the Cedarcrest High School dress code will be observed at all times. Further, clothing with spaghetti straps or that show the midriff (belly) are specifically forbidden. Clothing that shows a student's underwear is also forbidden. Clothing with drug, alcohol, gang, and/or hate related symbols or messages are also forbidden. Students will first be asked to change or cover the offending clothing described in the student handbook, above, and/or as deemed inappropriate by the instructor. Students who are continually asked to change or cover offending clothing will be marked tardy for the day when asked to change attire and are subject to the tardy policy. They will also be subject to penalties in the professionalism grade. Foul language is not permitted in class. Violators of the foul language policy are subject to the school disciplinary measures and the professionalism standards.

Artificial Intelligence (AI)

Artificial Intelligence is becoming an increasingly big (and arguably important) part of life these days. But it must be used with caution in education. As such, there is a new AI policy at Cedarcrest High School that will be adhered to in the architectural & engineering design classes as well.

AI is not necessarily easy to detect in designs or design documents. However, authorship is. Just as every writer has a unique style of writing, so it is that every designer has a definite style of designing. Which is why students will be asked to explain their designs, in documents and orally. When they are not able to explain their own designs, something is amiss. Whether that something is AI or not can have far reaching consequences, especially since the school AI policy is cumulative through a student's entire high school career. There is a big difference between getting 75% maximum (without the opportunity to redo it) because you cannot explain a project and having one of your AI strikes levied against you because you had AI create your project or do your documentation.

More thoughts and explanations about AI at: <https://github.com/MichaelTMiyoshi>

Grades

Grades will be determined by the following weighting of five categories:

- 1) **Professionalism (10%; Advanced 10%)** – Professionalism is an important part of the class. Aspects already mentioned such as dress, language, and attendance are important. As such, professionalism is evaluated each day. Four points are available each day. Any absence except school-related will receive

no points until students make them up. Students who do not make up these professionalism points within a week are only eligible to make them up for 75% (3/4) of the points. Students who are tardy will receive 2 of the 4 points. Students who are disruptive, sleeping, playing games, swearing, etc. will receive 0 points and will not be allowed to make them up. All the above is to say that students who treat the class as a job ought to earn all of their professionalism points each day they are present.

- 2) **Leadership/Professional Development (15%; Advanced 15%)** – Each student will be given a list of activities in which he or she may participate for points. These activities range from leading the class in the flag salute to attending a national leadership conference. Students should also consider joining TSA, DECA, FBLA, WCTSMA, FFA, or other Career and Technical Student Organizations (CTSOs) for leadership and competition opportunities. Leadership points are accumulated throughout the school year.
- 3) **In-Class Assignments (20%; Advanced 0%)** – Students are given in-class assignments to help them master the content and skills of the class. These assignments may be in the form of tests (different from competency tests) or short design problems that they will be required to finish in a short time period, sometimes by hand.
- 4) **Competencies (20%; Advanced 20%)** – As the students learn skills, they will be asked to perform practical timed tests. These tests are merely models and drawings that must be completed in a class period at a certain skill level. Beginning students may retake competency tests, however, they may not take any test twice in the same day or on the day the test is scored. (Advanced students' competencies are self-evaluated.)
- 5) **Project (35%; Advanced 55%)** – Students will create projects for much of their grades. This means that the application of the knowledge and skills they are gaining are what is most important. Beginning projects are done individually or in groups, depending on the project. Advanced students may create projects individually or in groups depending on the project. Students beyond the beginning level cannot earn an A grade for the class unless they complete at least one group project. Advanced students must also complete a “solve a world problem” project. Advanced students are graded on their body of work. This body of work must be of high quality and sufficient quantity to receive high marks. This quality and quantity may be different for different students depending on the skill level they are currently at.

The weighted average of the above categories is taken and the aggregate score is assigned a grade as shown in the following chart.

Percentage	Grade
93.00	A
90.00	A-
87.00	B+
83.00	B (Tech Prep students must earn a B or better to receive college credit.)
80.00	B-
77.00	C+
73.00	C
70.00	C-
67.00	D+
60.00	D
0.00	F

Even though the class is a year-long course, the grade earned at the semester is a final grade and will not be changed if the student earns a higher grade in the second semester.

Project Note: The following list of example projects may be used as a starting point for students once they get to the point in the class when they get to choose their own projects:

1. TSA state and national competitions (<http://www.tsaweb.org/>)
2. Imagine Tomorrow (<http://imagine.wsu.edu/>)
3. Real World Design Challenge (<http://www.realworlddesignchallenge.org/>)
4. Construction Challenge (<http://www.constructionchallenge.org/>)
5. (First Robotics)

Consideration for projects not on the list will be considered on a case to case basis.

Minimum Grades

Minimum grades may be earned only in the competency category. If students have done work in the assignments and/or project sections that demonstrate skill in the required area(s), they will receive a minimum of 50% score for any competency test they have demonstrated the skill. Students receiving zeroes in any category (especially the competency category) are not doing enough relevant work to receive credit.

This minimum grade only applied to the competency category. All other categories accumulate points toward the students' grades.

Turn In Policy

I believe all students can learn given enough time, but I also believe that students must be given realistic time-frames in which to operate. To help with each of these conflicting objectives, students will be held to certain times for turning in assignments. With few exceptions, all assignments can be turned in for full credit within two weeks of their dates in the gradebook. Competency tests must be taken within two weeks of the due dates in order for students to be eligible to retake the tests for full credit. If students have not taken a competency test after two weeks from the due dates, students may only take competency tests for a maximum of 75% of the possible points.

Computers

Computers are an important tool for the Engineering Design class and must be treated as such. Students who misuse computers, especially by altering system files, introducing viruses, creating/downloading inappropriate drawings or files will receive the appropriate sanctions as outlined in the school computer use and internet agreement. This may include exclusion from the use of computers and subsequent failure of the class. All students enrolled in Engineering Design must have on file a current signed computer use agreement.

Dual Credit – College Credit and Careers Network

You can receive inexpensive Community/Technical College credit. To receive the credit, you must:

1. Be enrolled in a Dual Credit high school class (Arch and Engr Des I, II, III)
2. Register on line for the Dual Credit program (<https://www.ctesers.org/Home>)
3. Pay the registration fee
4. Receive a B grade or higher!

Competency Lists

The following competencies are the skills that students are expected to gain when they take Architectural and Engineering Design. The numbers come from different guiding agencies and show what level of difficulty. Students in beginning classes will learn the competencies with numbers starting 111 and 131 (and may even learn advanced competencies). Advanced students will enhance these competencies and learn those starting with 132 in the second year and 300 in the third year. Students will learn these competencies using Autocad, Rhino, and/or SolidWorks.

Understands Terms and Uses Equipment Properly:

11101 Understands drafting equipment and use.

Sketches and Uses Orthographic Skills:

11103 Understands basic orthographic skills as shown by completion of assignments.

13119 Identifies and utilizes lines and surfaces throughout adjacent orthographic views

Sets Up CAD Software and Drawings:

13101 Starts, boots, and runs CAD software

13102 Saves and manipulates files in computer environment

13103 Selects appropriate units of measurement for drawings

13104 Sets up the drawing environment (units, limits, grid, and snap)

13105 Creates and uses layers to organize information in a drawing

13106 Selects appropriate linetypes

13207 Arranges multiple views of a figure on screen at one time

13210 Places XYZ drawing axis to best advantage on 3D drawings

13212 Sets up drawings to use in shading and rendering programs

Draws Geometric Entities:

11102 Show proficiency of lettering, sketching, construction geometry, scaling, and line conventions as shown by completion of assignments.

13107 Accurately creates geometric entities (line, arc, circle, etc.)

13108 Precisely attaches entities to existing geometric entities (o-snap)

13203 Digitizes an existing drawing to CAD

13205 Draws 3-dimensional mesh figures

13206 Uses point filters to locate points in space

13208 Sets and uses elevation (or Z) and thickness to create simple 3D figures

30002 Models on other than the world plane

30005 Creates models full scale

30006 Creates simple surfaces and solids

30007 Creates surfaces from polylines

30008 Creates solids from surfaces

30009 Creates surfaces from solids

30018 Imports and exports drawings/parts

30020 Uses layers to organize models

Uses Part Libraries:

13110 Groups drawing elements together (block, wblock)

13111 Utilizes symbol libraries (insert, scale)

Annotates and Plots Drawings:

13112 Adds text information to the drawing (text)

13113 Dimensions drawings to ANSI standards

13114 Scales and plots drawings to plotter and printer

13213 Creates files to use in machining programs

30014 Creates scenes with lighting

30019 Uses object properties and textures

30021 Changes rendering options

30022 Plots drawings

30023 Renders models

30024 Uses appropriate rendering techniques

30025 Creates appropriate renderings

Creates Special Views:

13115 Draws section views. Uses ANSI standard hatch patterns.

13117 Creates lines and arcs of varying widths

13118 Draws pictorial views

13209 Controls unneeded lines for 3D figures

Modifies Drawings:

13109 Edits existing drawing (erase, trim, stretch, move)

13116 Modifies or creates chamfers, fillets, and rounds

30010 Performs point editing

30011 Performs Boolean operations

30012 Performs rail sweeps

30013 Performs splits and trims

30015 Applies planar curves to surface

30017 Arrays elements (curves, surfaces)

30026 Blends surfaces

Cedarcrest High School Grading Scale:

Grading Mark	Grade Point	Grading Mark	Grade Point	Grading Mark	Grade Point	Grading Mark	Grade Point
A (100-93)	4.0	B+ (89.99-87)	3.3	C+ (79.99-77)	2.3	D+ (69.99-67)	1.3
A- (92.99-90)	3.7	B (86.99-83)	3.0	C (76.99-73)	2.0	D (66.99-60)	1.0
		B - (82.99-80)	2.7	C- (72.99-70)	1.7		

Note: The minimum passing mark/grade is D = 1.0. Pass/Fail, credit/no credit, and satisfactory/unsatisfactory marks may also be used on a limited basis at the discretion of the teacher.

Cedarcrest High School Grading Practices**Summative Assessment Retake Policy**

Students can retake major/summative assessments to show proficiency and are guaranteed at least one retake per quarter. After that, the teacher decides whether a student can retake additional assessments.

- Retakes must happen at least two weeks before the quarter ends.
- Exception: if an assessment falls within the last two weeks of quarter 1 or quarter 3, students can retake it during the first week of the next quarter.
- Assessments given in the last two weeks of a semester-long class, or in the last two weeks of the second semester, generally can't be retaken.
- Before retaking, your teacher may require a reflection, finishing earlier unit steps, corrections, revisions, and/or extra practice. If students skip any required prep work, they lose the retake opportunity.

Missing Work/Late Work

Late work will be accepted with no penalty as follows:

- Until the end of each unit.
- Can be extended at the discretion of the teacher or in accordance with the Riverview School District's Excused Absence Policy. Absences at the end of any term may impact a student's grade as a teacher will not be able to accept missing/late work beyond the final due date for quarter or semester grades.

Quick Reference: Key CHS Policies - [Student Handbook](#) | [CHS Red Wolves](#)**Academic Integrity Policy**

Cedarcrest High School requires honest, original work. Cheating, plagiarism, and unauthorized AI use or collaboration are prohibited unless a teacher permits it. Violations bring escalating consequences up to possible class failure.

For more details about this policy, please see the CHS Student Handbook.

CHS Electronic Device Policy

Cedarcrest High School prohibits phones, earbuds, smartwatches, and gaming devices during class periods, including hall passes, to protect focus and safety. Violations bring escalating consequences up to extended office holds of electronic devices.

For more details about this policy, please see the CHS Student Handbook.

CHS Hall Pass Policy

Students must get teacher permission and use the Synergy Hall Pass system for all passes, limited to six minutes. Ongoing violations bring referrals, pass restriction, and progressive discipline.

For more details about this policy, please see the CHS Student Handbook.

CHS Attendance and Tardy Policy

Regular attendance matters. Families must verify absences via Family Access or the Attendance Office. Letters follow the 3rd, 5th, and 7th absence; over two unexcused tardies weekly means detention.

For more details about this policy, please see the CHS Student Handbook.
